

BLACKBOX

BLACK BOX

Concept:

In both English and Spanish, black box is still the most used colloquial name for flight or navigation recorders, despite the fact that they are actually orange. It owes its name to the fact that in these cases the warnings section appears highlighted with a black box with thick edges. Other synonyms in English are: black-box warning, black-label warning and boxed warning. In engineering, physics, computer science and other scientific-technical disciplines, a black box is called the element that is studied based on the inputs it receives and the outputs or responses it produces, but without taking into account its internal functioning; so that its input and output interface is very well defined, but with ignorance of the internal details of its operation.
